

Cyber Security

Spotlight

KPMG's Cyber Security practice helps clients effectively manage and control corporate information assets across a broad spectrum of evolving threats and scenarios. Companies today increasingly realize that security is not a one-time project, but instead a strategy that must be adaptive to changing threats, remain consistent with the organization's business initiatives, and deliver benefits such as manageability, assurance, and efficiency. We help companies identify their most important information assets and work with them to develop an effective approach to combining technology and business processes. We work with clients to help enhance the value that can be obtained from their data while protecting key business processes, information assets, and the company's brand and reputation.

Value proposition

KPMG helps clients obtain value from critical business data, while protecting information assets and the company's brand and reputation. Clients gain from increased confidence in the security of the underlying data, reduced risk of data leaks and regulatory noncompliance, lower costs related to errors and litigation, improved organizational efficiency, and less wasted time.

Potential benefits

KPMG's Cyber Security team helps clients identify and mitigate evolving security threats by:

- Helping the organization deliver innovation through the effective use of secure Information Technology (IT) resources
- Assisting the organization in preserving the confidentiality and privacy of customer and corporate data
- Helping to enable the integrity and reliability of information stored on corporate systems
- Working with companies to reduce the high cost of IT security failures, both financially and in terms of their brand reputation
- Helping to establish and increase the confidence of customers and other key users of IT systems.

Primary industry sectors

Focus is on all industries, but greater focus is on heavily regulated and critical infrastructure such as the following: financial services (banking and capital), healthcare, energy, and government. Other industries include high-growth markets and technology.

Preferred majors

Bachelor's or master's degree in information systems and technology, computer science, computer programming, system analysis, applied technology management, business and computer information, database technology or a related discipline

Success story

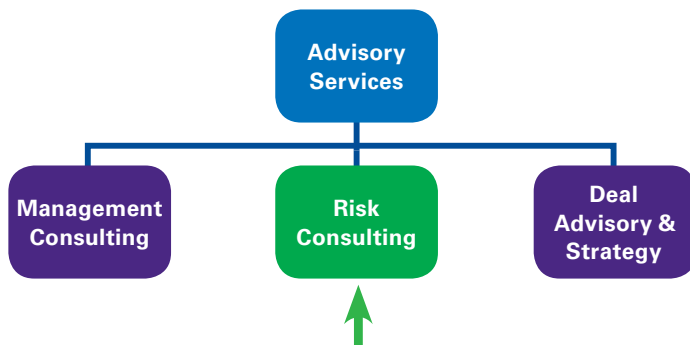

- KPMG's team assisted one of the largest global software companies to align its security strategy to its new delivery approach. Focus areas included developing new governance to protect increasingly more sensitive intellectual property, providing more controls transparency for clients as they move to cloud delivery, and automating compliance with new regulations based upon new offerings.
- KPMG International was named a global leader in information security by Forrester Research Inc. in its prestigious annual report—Forrester Wave: Information Security Consulting Services, achieving the highest score for current offering and strategy (tied).

Client profile

Use and processing of critical information, multiple jurisdictions including multinational, use and processing of highly valued intellectual property or brand, heavily integrated vendor/business partner change
